Presidency Division.—Mr. Cassels, Magistrate of the 24-Parganas, writes as follows as to the working of the municipalities in his district:—

A few municipalities in the industrial area are efficiently managed, tackle their problems energetically and are alive to the needs of a town population. At the other end of the scale there are many more, not so advantageously placed, some of them rather resembling overgrown villages, where a sense of civic pride and responsibility is confined to a few, where faction is not unknown and where in the sphere of practical municipal work, the prevailing note is too often one of lassitude and laissez faire.

The activities which deserve notice are mainly those directed to improve public health. The Naihati and Bhatpara schemes for water-supply have been worked out in detail and have been submitted to the Sanitary Board. Kamarhati has a scheme in view while certain other municipalities made progress in the sinking of tube-wells. The Titagarh sewerage scheme is still making slow progress and a scheme has been prepared for Kamarhati. An epidemic of small-pox which was more severe in the densely populated municipalities in the industrial centres was met by increased vaccination and other precautions. Little interest was on the whole evinced in the extension of primary education, but Budge-Budge should be mentioned as an exception.

The Magistrate of Nadia remarks that on the whole municipal affairs in that district "have been quiescent save in Santipur and Nabadwip where the interests of opposing factions create an unreal atmosphere of energy which is not actually beneficial to the public. The executives of these municipalities dissipate their energies in internecine strife. Yet it is just in these municipalities that no attention whatever is paid to the most elementary duty of any public administration—the provision of an adequate uncontaminated water supply." In Santipur the expenditure on water-supply amounted to Rs. 67 spent in repairs to a well. In Nabadwip out of Rs. 480 budgeted for water-supply only Rs. 29-7 was expended. The chief problem of the Krishnagar Municipality is its roads which are said to be "without any manner of doubt the worst roads in The Governor in Council is however glad to learn that the Municipal Commissioners are making a determined effort to improve them; they have taken a loan of Rs. 25.000 during the year 1925-26 for substituting stone metalling for jhama and for the purchase of a steam roller. The Magistrate reports that the water-works of the town, though expensive, have proved beyond cavil of the greatest benefit to

the health of the town. Several municipalities, viz., Santipur, Birnagar and Chakdaha present a very difficult sani-tary problem. "All three are large areas comprising many deserted homesteads, abandoned tanks and tangled undergrowth—once the abode of a much larger population. . Chakdaha Santipur have given up making much show of fight against these conditions, but Birnagar is determined to stamp out malaria. There is a Palli Mandali in this place "which is determined, by jungle clearing, kerosenisation of tanks and sinking of tube wells, to rehabilitate the fortunes of this once beautiful town. The Samity is fortunate enough to have the services of several gentlemen who are experts in engineering and sanitation.

At Kusthia the Commissioners have a development scheme and have acquired land and constructed roads in advance of the growth of the town. This municipality is efficiently administered and shows commendable foresight and un-animity of opinion. The municipal administration of the Murshidabad district was efficient so far as municipal funds permitted. The health of the muni-cipal towns was generally good. The Berhampore Municipality has made arrangements for the correct registration of births and deaths, and offers rewards to the staff for detecting omissions. The new Jessore Municipal Board has made a start. Kotechandpur continued to do excellent work while Moheshpur in the Magistrate's opinion "shows further deterioration." Good work was done by the Khulna Municipality. The town was visited by small-pox in an epidemic form, but the Municipal Commissioners took speedy measures to check the disease.

The Commissioner of the Presidency Division makes the following remarks:—

No striking advance was achieved in the administration of municipalities during the year under review. The marked difference between the standard of administration of the good and bad municipalities commented on in the previous reports continues, and since the transfer of the Cossipur-Chitpore and the Garden Reach Municipalities which were two of the best managed municipalities of the Division, the number of inefficient municipalities in the district of 24-Parganas now considerably exceeds the number of well-managed ones. As example of the former type may be cited the municipalities of Panihati, Rajpur, mollygunge and Baraset. The realisation of

tax in these municipalities is very unsatisfactory while the cost of administration is heavy though the actual work done is very small. It is much to be desired that these Commissioners should realise their civic responsibilities and adopt coercive measures for the realisation of taxes without too much fear of unpopularity, and take more real interest in the affairs of the municipalities and adopt business-like methods in replying to correspondence and attending to audit objections. Nabadwip and Santipur are examples of municipalities which are rent by dissension and party feeling which prevent useful work being done in them. Krishnagar stands out as the municipality with probably the worst roads in the province. This municipality was handicapped on account of the water-works not being completed in time with the result that a large portion of the general funds had to be utilised for repayment of the loans taken for the water-works.

Dacca Division.—Mr. Drummond, Magistrate of Dacca, makes the following remarks as to the working of the municipalities in his district:—

In spite of good intentions the Commissioners of the Dacca Municipality were seriously hampered during the year by continued failure to realise the taxes due to a campaign of propaganda and injunctions engineered by an individual who received support and sympathy in his vendetta from a large section of the public instead of the disapproval which it merited. It is evident that not many of the rate-payers realise that the Municipal Board is their own creation, an extension of their own personality and that to attack it is suicidal. The Chairman, Mr. K. Nazimuddin, showed great courage, forbearance, and tact in dealing with a very unpleasant and difficult situation. He was ably backed by the Vice-Chairman. The most notable achievement of the Commissioners was the opening of three primary schools as an earnest of their desire to equip the whole city with free schools of this type. Certain extensions to the lighting and pipe-water system were also carried out.

The Narainganj Municipality is described in the District Gazetteer published in 1912, as probably the most efficient in Bengal. Though there are no very serious blemishes on the municipal administration it can no longer claim this proud distinction.

As regards the working of the municipalities in the district of Mymensingh Mr. Twynam observes as follows:—

The financial condition of the municipalities within this district indicates a remarkable absence of business ability. This characteristic appears to be due partly to inexperience and partly to the fact that Municipal Commissioners are usually busy men who have their own livelihood to earn. It is accentuated by the absence from most municipal boards of any technical knowledge or experience and encouraged by a spurious sentimentality which regards enforcement of

the provisions of sections 121-124 of the Municipal Act as a great hardship. It would seem that most of the above difficulties would disappear if municipalities had paid secretaries thoroughly acquainted with their work and of sufficient standing both to influence opinion and control the clerical staff.

The Governor in Council commends the above suggestion to all the municipalities in the Province.

As regards the municipalities in Bakarganj the Magistrate observes that on the whole they are doing their best with the resources at their disposal. The Barisal Municipality is taking special steps to deal with its heavy arrear demand.

Chittagong Division.—The Commissioner of the Division gives credit to the Municipal Commissioners of Chittagong for their various activities in spite of their financial difficulties. The special feature of the Comilla Municipality was the completion of its water-works. Noakhali is still under erosion on the northern side while on the east and south sides a large reformation is going on. The financial condition of the municipality is bad and there is no immediate hope of improvement. Other municipalities in the division are doing good work with the limited resources at their disposal.

Rajshahi Division.—The Commissioner of the Division observes:—

The Rajshahi Municipality has suffered much from party faction amongst the Commissioners. The water-supply project of the municipality is yet very incomplete and it is doubtful if funds will be found for financing it. The party faction in the Dinajpur Municipality was so strong that 5 Commissioners immediately resigned after election because their party could not get a majority. The municipality is in need of a loan to finance the project for construction of the Dinbazar bridge over the Karolla and the application has been recommended to Government. In Rangpur Municipality it is too early yet to say how far the education cess has furthered the cause of primary education. The finances of the Pabna Municipality show little improvement and it is doubtful if the municipality will be able to pay its share of the water-works scheme. In Bogra there have been complaints for the municipality's negligence of roads in the town. The work of the Darjeeling Municipality has always been up to the mark

17. Conclusion.—The year under review has not seen any very marked improvement in the general level of municipal administration which continues to

be hampered by lack of funds. The incidence of taxation is still very low in many municipalities as the result of aversion on the part of Municipal Comincreased taxation. missioners to Another regrettable feature of the administration was the marked disinclination of the municipal executive to adopt coercive measures for the timely realization of taxes of which more than Rs. 13 lakhs were allowed to fall in arrears. In certain municipalities again the administration was hampered by party spirit and faction. There are, however, in some towns signs of an awakening. Increased attention was paid by several municipalities to the improvement of public health and the spread of primary education.

The Congress or Swaraj party was successful in obtaining seats in some municipal boards. It cannot be said that there has in consequence of this been any marked change in the methods or spirit of administration in those municipalities and both Swaraj and non-Swaraj members appear to have cooperated in carrying on the administration.

The Bengal Municipal Bill which aimed at enlarging the scope of municipal work by the relaxation of internal Government control and by enabling municipalities to enhance their revenues, was unfortunately thrown out by the Bengal Legislative Council on the first reading in December 1925.

The names of the following Chairmen, Vice-Chairmen, and Municipal Commissioners have been specifically brought to the notice of Government by the Commissioners of Divisions on account of the good work done by them and the Governor in Council desires to express his appreciation of the public spirit shown by these gentlemen and of the valuable services they have rendered:—

Burdwan Division.

Babu Nagendra Nath Ray, Chairman, Tamluk

Babu Sruti Nath Chakravarti, Vice-Chairman, Tamluk.

Babu Nritya Gopal Sarkar, Chairman, Ghatal.

Mr. J. White, Chairman, Champdany.

Mr. S. K. Bose, Chairman, Burdwan.

Presidency Division.

Mr. H. H. Spalding, Chairman, Kanchrapara.

Rai Sahib Krishna Chandra Ghatak, Vice-Chairman, Kanchrapara.

rapara. Mr. W. W. Craig, Chairman, Halisahar.

Rai Barada Kanta Mitra, Bahadur, Chairman, Naihati.

Mr. J. B. McEwan, Chairman, Bhatpara.

Rai Shyama Charan Bhattacharjee, Bahadur, Vice-Chairman, Bhatpara.

Mr. W. T. McEwan, Chairman, Garulia.

Mr. R. N. Neish, Chairman, Titagarh.

Babu Abinash Chandra Sarkar, Vice-Chairman, Kamarhati.

Babu Pran Krishna Shaw, Chairman, Baranagor.

Babu Hari Mohan Mukherjee, Chairman, Krishnagar.

Maulvi S. M. Akbaruddin, Vice-Chairman, Krishnagar.

Babu Tarapada Mazumdar, Chairman, Kushtia.

Babu Nagendra Nath Mukherjee, Vice-Chairman, Ranaghat.

Babu Sadananda Bhattacharya, Vice-Chairman, Nabadwip.

Babu Ram Krishna Pal, Commissioner, Meherpur.

Rai Sahib Nilmani Bhattacharji, Vice-Chairman, Berhampore.

Rai Surendra Narain Sinha, Bahadur, Chairman, Azimganj.

Babu Dwijapada Chatterjee, Chairman, Jangipur.

Babu Sachindra Nath Roy, Chairman, Dhulian.

Munshi Eusufali Sardar, Commissioner, Kotechandpur.

Babu Upendra Nath Bose, Chairman, Khulna.

Maulvi Shamsur Rahman, Vice-Chairman, Khulna.

Dacca Division.

Mr. K. Nazimuddin, Chairman, Dacea.

Rai Keshub Chandra Banerjee, Bahadur, Vice-Chairman, Dacca. Babu Surendra Nath Roy, Chairman, Faridpur.

Båbu Tarak Chandra Chatterjee, Vice-Chairman, Faridpur.

Babu Akhoy Kumar Saha, Chairman, Madaripur.

Babu Girindra Nath Roy, Choudhuri, Commissioner, Madaripur.

Babu Sarat Chandra Guha, Chairman, Barisal.

Babu Hemanta Kumar Rudra, Chairman, Patuakhali.

Babu Rajani Kanta Chatterjee, Chairman, Jhalakati.

Chittagong Division.

Babu Upendra Mohan Mitra, Chairman, Comilla.

Maulvi Siddiquer Rahaman, Vice-Chairman, Comilla.

Maulvi Nur Ahmed, Chairman, Chittagong.

Babu Jogendra Nath Guha, Vice-Chairman, Chittagong.

Babu Bepin Behari Rakhit, Chairman, Cox's Bazar.

Rajshahi Division.

Babu Surendra Nath Bhaya, Chairman, Rajshahi.

Babu Tarakeswar Chakravarti, Vice-Chairman, Dinajpur.

Babu Phani Bhusan Mazumdar, Vice-Chairman, Rangpur.

Babu Suresh Chandra Adhikari, Commissioner, Rangpur.

Babu Hem Chandra Mazumdar, Commissioner, Rangpur.

Babu Devendra Nath Ray, Vice-Chairman, Gaibandha.

Babu Gour Lal Pal, Vice-Chairman, Pabna.

By order of the Governor in Council.

J. G. DRUMMOND, Secretary to the Government of Bengal (offg.).

Khulna Division.

CALCUTTA, the 13th March 1926.

DISTRICT REPORTS ON WEATHER AND CROPS.

Summary.—Rainfall was general throughout the Presidency. It has facilitated the field operations for autumn crops, especially in the lowland tracts, and favoured the growth of summer paddy and vegetables. The average price of common rice for the Presidency has risen by about 0.35 per cent. as compared with that of the previous week.

J. C. Roy, for Director of Agriculture, Bengal.

Burma rice.

(a) The rainfall at Haridaspur, which, is very near to Gopalgani, is shown here.

DEPARTMENT OF AGRICULTURE, BENGAL.

Monthly Weather and Crop Report of Bengal for February 1926.

- I. Character of the season.—Light and scattered showers fell during the month, the precipitation being above the average in three districts. The usual rainfall statement is appended.
- II. Progress of agricultural operations.—Harvesting of early spring crops was almost finished and that of the late varieties continued. Preparation of lands for jute and autumn paddy was progressing in the low land tracts of East and North Bengal, although more rain was required for the operation.
- III. State of standing crops.—Standing crops including vegetables were thriving fairly well.
- IV. Prospects and probable outturn.—The outlook of summer rice is fair at present. The outturn of wheat was estimated at 78 per cent. of the normal.
- V. Damage to standing crops.—No appreciable damage to the standing crops was reported from any district.
- VI. Condition of agricultural stock.—The condition of agricultural stock was reported to be fair. Sporadic cases of cattle-disease were reported from 15 districts.
- VII. Failure of pasturage and fodder.—No insufficiency of fodder was reported from any part of the Presidency.
- VIII. Prices of food-grains.—During the second half of the month the price of common rice of the cheapest quality rose in seven districts, fell in two, and remained stationary in the rest of the Presidency. It ranged from 8 seers per rupee at Midnapore to 5 seers 4 chitaks per rupee at Burdwan, Rajshahi and Faridpur.
- IX. Condition of agricultural population.—The condition of agricultural population was, on the whole, fair.

J. C. Roy,

for Director of Agriculture, Bengal.

DACCA, the 12th March 1926.

RESOLUTION ON THE REPORT OF THE NORTHERN BENGAL FLOOD COMMITTEE.

GOVERNMENT OF BENGAL.

IRRIGATION DEPARTMENT.

Irrigation.

CALCUTTA, THE 9TH FEBRUARY 1926.

RESOLUTION-No. 1-I.

Bengal Government resolution No. 1-I., dated the 6th February 1923.

READ ALSO-

Report of the Northern Bengal Flood Committee.

The attention of Government having been drawn to the damage caused by extraordinary floods in the Rajshahi Division, more especially in the districts of Rajshahi and Bogra, in August 1918 and again in September districts of Rajshahi and Bogra, in February 1923 to enquire into and 1922, a committee was appointed in February 1923 to enquire into and report on the causes of these floods. The committee have now submitted their report, which, with the appendices, contains a record of the evidence on which the conclusions have been drawn and the recommendations have been

2. The recommendations of the committee, which are detailed in paragraph 15 of their report, are briefly enumerated below:—

(1) Increased waterways under certain railways.

Maintenance of an open passage from the Chalan Bhil.

(3) An enquiry to be held to ascertain whether the outlets for the floods through the Hurasagar and other channels can be improved.

(4) Investigation of the possibility of improving the bed of the

Tulsiganga.

(5) Preparation of a flood code for the guidance of local officers.

(6) Introduction of the system of flood warnings similar to those in force on the Damodar river.

(7) Education of the people to build their houses on higher ground.

3. The committee, after a careful consideration of the past history of the floods in the area affected, have come to the conclusion that the floods of 1918 and 1922 were extremely abnormal and that similar floods had not been experienced for the previous 140 years. These abnormal floods were due to the fact that torrential rain fell over practically the whole of the basin of 6,800 square miles, whereas in previous years only a portion of the basin had been subjected to heavy falls. It was this factor more than any other which led the majority of the committee to come to the conclusion that the retentive reservoirs advocated by Mr. Gurtu would not be justified, because the expense would be too large as compared with the occasional benefit to be derived. They are further convinced that it is not possible to prevent such abnormal floods which have only one outlet into the Jamuna (Brahmaputra) through the Hurasagar below Serajganj. They are, therefore, of opinion that the best policy is to get rid of the flood water as fast as possible, more especially from the Chalan Bhil, which will in itself act as a regulating The recommendations of the committee are based on this reservoir. principle.

4. The Governor in Council has read the report with great interest, and he agrees with the conclusions arrived at by the committee; he does not propose to discuss in detail the minor recommendations which have been made in the report, but he is in entire accord with the committee as to the necessity of these measures, and steps will now be taken to give effect to them. The measures advocated in the report will, His Excellency trusts, ameliorate to some extent the effects of future floods, though it is clear that under present conditions, when the Brahmaputra or the Ganges is in abnormally high stage, the floods must be held up on the land for some time until these rivers subside. His thanks are due to the members of the

committee and to those who aided in the enquiry, for their labours.

ORDER.—Ordered that this resolution and also the committee's report, the note of dissent by Mr. Gurtu, and Appendix I be published in the Calcutta Gazette.

Ordered also, that a copy of the resolution and of the report in two volumes be submitted to the Government of India in the Department of Industries and Labour (Public Works Branch), and to the Government of Assam, Public Works Department, for information.

Ordered also, that a copy of the resolution and of the report be forwarded to the Revenue, Local Self-Government and Public Works Departments of this Government, and to the Commissioner, Rajshahi Division, and the Agent, Eastern Bengal Railway, for information.

By order of the Governor in Council,

C. ADDAMS WILLIAMS, Secretary to the Government of Bengal.

REPORT ON THE NORTHERN BENGAL FLOODS, 1922.

Owing to excessive rainfall, extraordinary floods visited Northern Bengal
in August 1918, which were followed by
floods of still greater intensity in September 1922 causing considerable damage
in the districts of Rajshahi and Bogra.
The Government of Bengal accepting a
resolution in the Bengal Legislative
Council, in November 1922, appointed
a Committee of experts, official and
non-official, to enquire into and report
on the causes of these floods and to
suggest possible remedies.

2. Personnel of the Northern Bengal Flood Committee.—The personnel of the Committee was as follows with the power to co-opt:—

President:

Mr. G. T. Huntingford, Secretary, Irrigation Department, Bengal, up to the 8th March 1924.

Mr. C. Addams Williams, c.1, F., Secretary, Irrigation Department, Bengal, subsequently.

Members:

Dr. C. A. Bentley, Director of Public Health, Bengal.

Mr. R. C. Hodgson, Superintending Engineer, Northern Circle, Public Works Department, Bengal.

Mr. S. K. Gurtu, M.I.E., (Ind.).

Mr. F. C. Temple, Chief Town Engineer, Tata Iron and Steel Co., Ltd., Jamshedpur.

Babu Nani Gopal Mukherji, District Engineer, Rajshahi.

Babu Kiran Chandra Ghose, District Engineer, Bogra.

Mr. P. C. Mahalanobis, M.A., Meteorologist, Calcutta (co-opted).

Secretary:

Mr. A. G. Maflin, M.I.C.F., Executive Engineer, Public Works Department, and Personal Assistant to the Chief Engineer, Irrigation Department, Bengal.

The Committee was asked to report on

the following points:

- (a) The causes of the frequent floods in the Rajshahi Division and to suggest possible remedies.
- (b) (i) To ascertain the catchment area of the flood of 1922.

- (ii) To estimate its quantity as 'far as this is possible, and ascertain the path of the flood water and whether it was obstructed so as to cause damage by embankments whether roads, railways or otherwise.
- (iii) To determine the best path for the passage of the flood water and the openings in embankments necessary to pass it without undue delay, taking into consideration simultaneous floods in the Brahmaputra and Ganges.

The Committee held 5 meetings and most of the members visited the flooded area. Colonel Hearn, Agent of the Eastern Bengal Railway, also gave evidence before the Committee.

The floods in Northern Bengal in September 1922 were the outcome of very heavy local rainfall accompanied by high levels in the Ganges: though the floods in the Mahananda were high, the area mostly affected was that drained by the Atrai and its tributaries and bounded by the Tista river on the north, the Ganges on the south, on the east by the Karatoya river and on the west by the watershed of the Mahananda and Atrai, totalling 6,800 square miles (vide map). The general slope of the country is southsouth-east and averages about two feet per mile. The basin includes portions of the Jalpaiguri, Rangpur, Dinajpur and Bogra districts and the whole of the Rajshahi and Pabna districts: the northern and western portion of comparatively high comprises tract ground known as the Barind area and is a low-lying flat country containing a large number of bhils, a portion of which is open to the spill of the Ganges by the Baral and Ichamati rivers. The southeastern portion of the Pabna district and a small portion of the Rajshahi district are also subject to inundation from the Brahmaputra. The Atrai has its source in the Jalpaiguri district and flows in a southerly direction parallel to and to the west of the Eastern Bengal Railway main line to Manda, whence it turns to the south-east, crosses the main line and also the Serajganj branch after passing through the Chalan bhil and empties into the Brahmaputra at Bera, where it is called the Hurasagar.

The principal tributaries are the Jaboona which flows to the west of and

close to the Eastern Bengal Railway main line with its tributary the Tulsiganga which drains a portion of the area to the north of the Bogra branch and crosses the main line near Akkelpore; and the Nagor and Karatoya rivers on the east of the main line, the latter being the eastern boundary of the area severely flooded in 1922. The Baral joins the main stream near the Chalan bhil.

August 1918 and September 1922 exceeded in volume that of any corresponding period. There have other heavy talls but they were con for the most part to a portion of the leavy falls north of the Tista, but river diverted the water to the I maputra acting as a tap drain: in years a small area is usually flooded the Pabna district in the angle for

The past history of the rivers in the Rajshahi Division in the last century and a half will be found in Appendix I and need not be recapitulated here: prior to these changes the Ganges, which distributed its waters through the Bhagirathi, Bhairab and other rivers, changed its course to the south-east and it is probable that before this avulsion took place the Tista either flowed into the Ganges above Rampore-Boalia, following more or less the present course of the Atrai, or skirted the northern fringe of the Gangetic Delta. Due to the change in the course of the Ganges, deltaic action has been much intensified along the northern bank of the river and the drainage has been forced to change its direction to the south-east.

The Tista in 1787 forsook the bed of the Atrai and resumed an older course in a south-easterly direction to the Brahmaputra at Nalagang Hat: at the end of the 18th century the Brahmaputra began to open the Jenai and eventually discarded the Mymensingh channel for a more westerly one to Goalundo through the Jamuna.

The earthquake of 1897 also raised the beds of certain rivers in the northern portion of the area and caused an interference with the drainage.

At the present day there is one outlet only for the drainage of the Atrai basin through the Hurasagar into the Brahmaputra near Bera: the Ganges on the south and the Brahmaputra on the east have raised their banks and the floods in the two rivers, which meet at Goalundo, tend to back up the water of the Atrai basin when floods are simultaneous, with the result that the discharge of the land floods is delayed until the main rivers have subsided.

4. A study of the normal rainfall maps and statistics (Volume II) shows that Northern Bengal is one of the wettest areas in India. A careful scrutiny of the rainfall records since 1870 proves that the rainfall which caused the floods of

exceeded in volume that of any other corresponding period. There have been other heavy talls but they were confined for the most part to a portion of the basin only. In several years there have been heavy falls north of the Tista, but this river diverted the water to the Brah-maputra acting as a tap drain: in such years a small area is usually flooded in the Pabna district in the angle formed by the confluence of the Ganges and Brahmaputra, as occurred in 1892, 1906. 1910 and 1915. In the former year there was also heavy rain to the south of the Tista which did not extend very far to the south of the latitude of Parbatipur: although the railway from Katihar to Kaunia was severely breached, little if any damage was done to the country south of the railway.

In 1870, 1871, 1879 and 1915 no damage occurred except along the banks of the Ganges and Brahmaputra, showing that these rivers were high and were spilling more than the normal quantity of water. With the exception of a local flood at Dinajpur the same applies to the year 1885, whereas in 1886 the floods affected the country on the north bank of the Ganges and a comparatively small area on the eastern fringe of the Bogra

district.

In 1902 a small area near Rangpur was affected by a local flood and the rest of the basin suffered no damage.

Thus the rainfall records show that since 1870 the tract in question has not been nearly so heavily flooded as it was in 1918 and 1922. In both the latter years there was extraordinary rainfall over the whole basin focusing round Balurghat in the southern half of the Atrai basin, combined with high floods in the Ganges. In 1918 the heaviest excess amounted to 5 to 10 times the normal of the period of fall. But the rainfall of 1922 exceeded any previous record and occurred over the whole of the basin.

The excessive rainfall, lasting as it did from the 21st to the 28th September 1922, with an incessant downpour from the 24th to the 27th, and occurring at the end of the monsoon, when the rivers and bhils were full and the whole country saturated, was sufficient in itself to cause very heavy floods. The position was aggravated by the fact that the Ganges was in high flood, and 3 to 4 feet higher than the normal for the time of year, so that the water could not freely discharge. Old records have been searched to ascer-

tain the frequency of such floods and the results will be found in Appendix I: they cover the period from 1785 to date: a study of them will show that the floods of 1918 and 1922 exceeded any previous records with the possible exception of that of 1787 when the Tista broke away from its old Atrai course. A special enquiry has been made to ascertain whether the Tista river added to the flood by overflow over the right bank. The evidence gathered shows that no such spill took place.

The path pursued by the floods is most easily described in relation to the lines of the Eastern Bengal Railway intersecting the area. The area lying to the east of the main line and north of the Santahar-Bogra branch was flooded by the spill from the Tulsiganga, augmented by water of the Kata Jabuna, a connecting channel between the Tulsiganga and the Jabuna. Practically, the only outlet for all this water was the Tulsiganga bridge at mile 1823 on the main line, which is of 3 spans totalling 214 feet in length. As the country to the west of the main line was simultaneously heavily flooded, the flow was checked and the water headed up against the main line embankment, which was over-topped and severely breached between Tilakpur and Jamalganj stations. The remainder of the flood passed in a southerly direction until it reached the Bogra branch. Here it was joined by the high flood in the Nagar from the north-east and breached the line between Santahar and Kapaloo stations. It was this part of the line that suffered the greatest damage from the flood.

The Rajshahi district west of the main line was severely flooded by the Atrai and its tributaries, whereas the low-lying area to the east of the main line, in addition to its own rainfall, received the Atrai flood, augmented by that which burst through the Santahar-Bogra line on The whole of the flood therethe north. fore passed through the Chalan bhil and was discharged through the bridges on the Sara-Serajganj line and eventually into the Brahmaputra through the Hurasagar. The hydraulic data are insufficient to determine with accuracy the volume of the flood but approximate calculations show, that due to the ponding up of water in the low lands the discharge decreased as the flood progressed: it is roughly estimated that the maximum discharge across the main line south of Santahar was about 175,000 cusecs and

across the Bogra branch about 50,000 cusecs giving a total of 225,000 cusecs entering the Chalan bhil basin the discharge across the Sara-Serajganj branch was about 175,000 cusecs. No breaches occurred in the latter railway nor in the main line south of Santahar. Between the Atrai and Santahar the affluxes on the bridges actually recorded on the 5th October, when the flood had subsided one foot, varied between seven inches and one foot six inches (vide Appendix III). On the Serajganj branch the maximum heading was 2 feet 4 inches between bridges and 1 foot 9 inches at the bridges.

6. The number of breaches occurred and the affluxes recorded show that the waterways in the railways were insufficient to deal with the abnormal conditions. But it must be remembered that both the 1918 and 1922 floods exceeded in magnitude any other flood which had occurred during the existence of the railways: after the former additional waterway was supplied in the Bogra branch between Nasaratpur and Talara stations, amounting to 34 feet: since the 1922 flood further waterway has been supplied to the extent of 460 feet and a new bridge of 15 spans of 40 feet each has been built in the Serajganj branch at mile 151. At Akkelpore on the main line additional bridges aggregating 165 feet in length are being built. The railway are therefore taking steps on their own initiative to improve the which were the worst conditions experienced since the opening of the line. After considering the available evidence the Committee are satisfied that had there been no railways at all in the area, the rain which fell would have caused a flood, the severity of which would have been almost as great as that which actually occurred, though the area mostly. affected might have been situated a little further to the south-east and the flood might have subsided a little more rapidly. There is evidence to show that owing to the water being held up to some extent by the railways that a portion of the Pabna district which lies to the south of the Serajganj branch suffered little damage.

7. In regard to the waterways in the railways the Committee recommend that—

(a) Additional waterway be supplied in the Bogra branch over and above 460 feet already provided, unless the railway authorities can show conclusively that more waterway is not required. The

Committee wish to point out that although an addition of 861 running feet was originally proposed it is now stated that the provision already made is considered sufficient: in view of the fact that there have been no severe floods since 1922 and that there are grounds for believing that more waterway is still required between existing bridges, they find they are unable to accept the present position without further local investigation.

(b) Additional waterway of 21,400 square feet be supplied in the Sara-Serajganj branch of which 6,000 square feet has already the balance been provided; the balance should be located at or near mile

153.

(c) The waterways closed in the main line south of Santahar since 1904 be re-opened unless the railway authorities can produce adequate reasons for not doing so. While existing major bridges may suffice the waterway in the bank between them does not appear to be adequate to prevent undue heading.

(d) The dumping of stone on the beds of rivers at the railway bridges should not be permitted in cases in which the bridges have been designed to provide for scouring the beds during flood time. Where it is possible to remove the stone already deposited this

should be done.

(e) It should be made incumbent on the railway to provide such waterways as will secure the maximum afflux at bridges not exceeding six inches in an ordinary flood and not exceeding one foot in an exceptional flood, such afflux to be measured and not guessed.

8. There is little evidence to show that District Board roads appreciably opposed the forward progress of the flood: these roads as a rule are construced on embankments about two to four feet high. The rate at which the crest of the flood travelled was extremely slow, being only 8 miles per day, which was probably due to the country being covered with dense vegetation and the slope of the flood water being about four inches per mile through the Chalan bhil basin and only two inches per mile to the

south of the Serajganj branch. Although roads might have somewhat retarded the flow-off at the beginning of the flood, they were deeply submerged later on and could not have caused any undue heading when the main flood was passing over them. The Committee are of opinion that the height of road embankments should be kept as small as possible and provision should be made for passing floods across them with as little obstruction as possible, by the construction of causeways at the main

drainage lines.
9. The Committee have been impressed with the fact that the hydraulic data available regarding floods in the Atrai basin are most meagre. It appears that the duties of the officers of the Irrigation Department have not extended to the north of the Ganges until quite recently, and no gauge readings are available for any of the rivers with the exception of the Ganges and Brahmaputra. The Eastern Bengal Railway authorities have now fixed gauges on both sides of all major bridges and a subdivision of the Irrigation Department has been opened at Rampore-Boalia last year for the express purpose of keeping the Atrai and other basins under observation. Gauges have been fixed at Singra in the Chalan bhil and at Atrai and a proper record of flood levels and river sections will be maintained in future. We recommend that another gauge should be read at either Mahadebpore or Manda on the Atrai.

An attempt was made to gauge the rivers with the assistance of the Eastern Bengal Railway authorities in 1923 and 1924 but the absence of even average floods rendered this impossible: the data available which have been collected from various sources will be found

in Appendix I.

10. Mr. Gurtu, a member of this Committee, visited the flooded area in March 1923 and his notes of inspection will be found in Appendix II. In these notes a proposal has been made to construct flood regulating basins above the affected area both north and south of the Katihar-Kaunia line so that the floods below them may become more mild and manageable: the top of the flood would be retained for a time and allowed to escape after levels had fallen: a portion of the reservoirs would be utilized for storing water for rabi cultiva-tion. Mr. Gurtu roughly estimates the cost at three crores of rupees excluding compensation for the crops in the areas included in those reservoirs which would be designed to hold water throughout the year: he states that the expenditure will not be unremunerative, as extensive rabi irrigation will spring up in the same way as has occurred in Central India, the Central Provinces and elsewhere and a return of from 4 to 6 per cent may be expected. The cultivators should retire from the low lands subject to violent floods and build their tenements on higher ground and also change the system of cultivation from kharif to rabi in the areas subject to floods.

11. The Committee have discussed this proposal at length and have come to the conclusion that for the reasons stated below the expenditure cannot be recommended. Some of the proposed recommended. Some of the proposed reservoirs would be located in the area west of the main line to the north of Dinajpur which received the least rainfall. Reservoirs constructed to the east of the main line and north of the Bogra branch would command a catchment of 1,440 square miles par-tially, and would be located in the area where rainfall was most intense in 1922; but with a small movement of the focus of intense rainfall would not appreciably affect the intensity of floods. Previous records show that the position of the focus of the rainfall varies considerably. The past history of the basin as a whole in regard to floods does not justify a large expenditure on works which the Committee are not yet satisfied would be effective in preventing a similar cataclysm. They think that it is doubtful whether the cultivators will change their places of residence or methods of cultivation and the time must eventually arrive when the reserv-oirs would silt up. The low lands are being gradually raised by deposits of silt from the various rivers including the Ganges and Brahmaputra; the Chalan bhil has decreased considerably in area in recent years and is now one-third the area it used to be; levels recorded by the Public Works Department in 1909 and subsequently show the rate of rise of the bed of the bhil to be half an inch a year. This process should be allowed to continue and should not be artificially retarded, as the ultimate solution to the problem lies in the raising of the low lands sufficiently high to enable floods to discharge into the major rivers freely.

The area of the basin south of the Katihar Kaunia railway is 4,238 square

miles or nearly two-thirds of the whole and it is not expected that by holding back the top of the flood in the remaining third an appreciable fall in levels will occur. Assuming 12 inches of rainfall to have been temporarily stored in such reservoirs in 1922 in the portion of the basin north of the Bogra branch and east of the main line and that the average depth in them was 10 feet, the total area submerged would have been 144 square miles or one-tenth the area controlled. The volume of water retained would be about one-seventh of the total rainfall on the basin and would reduce the level in the low lands in Rajshahi, Bogra and Pabna districts by probably not more than six inches, which would not be sufficient to prevent most of the damage done. The area occupied by the reservoirs would have to be depopulated unless all homesteads were erected on high mounds and the amount of compensation to be paid would be very heavy. The difficulty of maintaining long lengths of embankment from damage by waves and of the possibility of accidents are other features which must be considered and the Committee do not feel they are justified in recommending this large expenditure for results which would be so small.

12. They wish, however, to draw attention to the fact that the level of floods is likely to rise in future due to the silting up of the bhils in the low lands: the retentive powers of this area are becoming less and less as time passes. At the beginning of the freshet season some of the lowest bhils are filled with water from the Brahmaputra and proposals have been put forward from time to time to prevent the inflow of this water during the earlier portion of the season by the construction of sluice, to enable the lowest lands to be planted. The Committee are of opinion that any such proposal should be examined with the greatest care before acceptance and that natural processes should be interfered with as little as possible, so that the day may be hastened when the land will have been sufficiently raised to drain itself by gravitation. The exclusion of the natural spill in other portions of the Province by embankments has led to untold trouble and has caused congestion of drainage: this difficulty is found in its most acute form where the area lies in the angle formed by the junction of two rivers, as in the present case: the embankments

prevent the land being raised with deposits of silt and at the same time, by confining the floods to the rivers themselves, cause their levels to rise higher, so that it is not possible to discharge the land floods until levels have subsided.

If natural processes are not interfered with the rise in flood levels will be gradual and the people will learn to accommodate themselves to the changing conditions by erecting their homesteads

on higher ground.

- importance on the question of disposing of floods quickly: they have already stated the additional waterway considered necessary in the railways but a point of importance is the fact that the Phulgore bridge on the Sara-Serajganj branch was of little assistance in disposing of water from the Chalan bhil area due probably to the fact that the bhil paddy obstructed the cross country flow. It is a question whether relief cannot be given in this direction by the maintenance of an open passage from a point above the bridge into the low land in a direction more or less north-west: the waterway in the bridge is 666 feet. This proposal should be investigated.
- 14. The replies to the questions referred to the Committee are as follows:—
 - (a) The causes of floods in the Rajshahi Division are—
 - (i) abnormally heavy local rainfall,
 (ii) high levels in the Ganges and Brahmaputra.

(iii) a combination of the two,

- (iv) contributory factors are insufficiency of waterways in the railways, flatness of the slope of the country, retardation of the flow-off of the water by vegetation and deterioration of river beds.
- (b) (i) The catchment area is shown on the map which accompanies this report and covers 6,800 square miles.
- (ii) It has not been possible in the absence of hydraulic data to estimate accurately the volume of the flood but approximate discharges are given in paragraph 5. The path of the flood has also been described in paragraph 5, and the extent to which it was obstructed by railway and other embankments is dealt with in paragraphs 6 et seq.

- (iii) The best path for floods is that already taken by them, there being only one possible outlet through the Chalan bhil into the Brahmaputra by the Hurasagar river at Bera.
- 15. The recommendations of the Committee are as follows:—
 - (a) Increased waterways under the Railways as recommended in paragraph 7, should be provided.

(b) The maintenance of an open passage from the Chalan bhil as suggested in paragraph 13, should be enquired into.

(c) An enquiry should be held to ascertain whether the outlet for the floods through the Hurasagar and other channels can be improved.

(d) The possibility of improving the old bed of the Tulsiganga should

be investigated.

(e) A flood code should be prepared for the guidance of local officers

in times of flood.

- (f) A system of flood warnings should be introduced more or less on the same lines as those which have been in force on the Damodar river since the great flood of 1913. The slow rate of travel of the water will enable these warnings to reach the people in the low land well in advance of the main flood.
- (g) The people should be educated to build their houses on higher ground.
- 16. The Committee regret the delay in submitting this report: the compilation of the records of rainfall has been a laborious task and the collection of hydraulic data from various sources has taken much time.

C. ADDAMS WILLIAMS, President.

A. G. MAFLIN,

Secretary.

Mr. Gurtu has signed the Report subject to a note of dissent.

Note of Dissent on the Report of the Northern Bengal Flood Committee, by Mr. S. K. Gurtu, M.A., M. Inst. C. E., M.I.E. (Ind.), Member, Northern Bengal Flood Committee.

All the trouble of the people of lower Bengal is due to an imperfect under-standing of the operations of the laws of Nature and acting counter to them! The whole of the Indo-Gangetic plain, from Cuttack to Calcutta, has been formed by the deposits of silt and detritus, brought down by the rivers taking their rise in the Himalayas. As the land in the upper regions rose gradually and river channels deepened, the regimen of the rivers became stable, and high lands on the banks ceased to be flooded. The floods in lower Bengal are a manifestation of the same process which has formed Punjab, United Provinces and Bihar in millions of years and this will go on whatever we may do, till the lower Bengal too will rise sufficiently to be above the high flood levels of its rivers! As exceptionally high floods do not occur at short periods, people, lulled into a sense of security, begin to live a little above the ordinary high flood levels to protect their riverain crops (kharif) and are overtaken by floods should abnormal conditions of rainfall prevail, as they did in 1918 and 1922. When an abnormally high flood causes serious damage a hue and cry is raised, but within a year or two the villagers unconcernedly relapse into their old ways and generation after generation history repeats itself and Nature exacts heavy toll for defiance of its laws. If, in addition to this, conditions are created artificially, e.g., laying of high railway embankments across the surface slope of the country which favour obstruction of floods, devastation more extensive and. widespread misery result. This brings me to the subject of the Report.

2. I generally agree with the Committee about the causes of floods in the Rajshahi Division, but would offer some comments about causes which have either been omitted or minimised. The Committee rightly emphasises abnormally heavy local rainfall but has omitted to record that simultaneous heavy falls in the North greatly intensify the situation. Mr. J. T. Rankin, Commissioner of the Rajshahi Division, has the following significant remark in his Report, dated the 25th November 1919:

"In Rajshahi the heavy rainfall began on 24th August and this added to the

floods draining from the Bogra and Dinajpur districts, caused the whole country to be flooded." A reference to the rainfall statement, accompanying the President's note on the previous floods (received with the Secretary's letter No. 501 I., dated the 28th January 1925), will show that while heavy rain was falling in mid and lower Bengal heavy rain from 4 to 10 inches and more was falling in Northern Bengal too, from 24th to 27th August 1922! The Meteorologist has the following observations in his rainfall notes:—

Floods of 1918.

Dinajpur.—On account of heavy rains since June last considerably in excess of the average of previous years the pools, tanks, canals, etc., were almost full to the brim and the continuous downpour from the 23rd to 26th August resulted in a flood in the town such as has not been witnessed here within living memory.

Bogra.—The area affected by flood in Bogra is about 100 square miles. The flood is subsiding very slowly.

Bengali, September 3.

Flood in North Bengal.—We understand that the flood in Bogra district and in Naogaon subdivision and other parts of North Bengal is of a far more serious nature than was at first apprehended.

A careful study of the flooded area shows that the flow of the excess rainfall was mainly from the north-north-west to the south-south-

Floods of 1922.

The rainfall in Dinajpur and in the nighbourhood of Balurghat flooded the Jamuna and Atrai rivers and this coupled with the local fall in the Naogaon and in the north-west corner of Bogra, caused an unprecedented flood in the low-lying country.......

The trouble in the present year has been due to the fact that in addition to the flooding due to the heavy local rainfall, the overflowing from the Tulsiganga on the northwest and from Nagore on the north-east side had to be passed.

These quotations go to show that heavy falls of rain simultaneously in the north, above the Dinajpur-Rangpur Railway line and the lower districts, are the main cause of the trouble,

specially when they synchronise with abnormally high floods in the Ganges

and the Brahmaputra!

3. Among the contributory causes a specific and definite mention must be made of the obstruction caused by the District Board roads. Their banks may not be higher than 4 feet and when the floods over-topped them they may not have caused obstruction in such localities, but the extensive general retardation of floods that resulted from them in a flat country with a slope of about 2 feet per mile, must have been considerable and kept the flood longer on the land than would otherwise have been. The fact of there being "little evidence to show that District Board roads appreciably opposed the forward progress of the flood", merely shows that no evidence was taken and not that there was no evidence to be taken.

4. The Committee has recognized the great obstruction caused by the Railway banks and also the inadequacy of the existing waterways but they have not admitted definitely and clearly that as the cros; banks interfere with the surface drainage of the country mere increase of waterway will not meet the situation, as the surface flow obstructed by the Railway bank has to turn right or left to find an outfall under the bridge openings and has thus to travel a longer distance and to slightly head up to generate sufficient velocity to flow against the natural lie of the country! I have endeavoured to bring out this point in my Inspection Notes, dated the 10th—13th March 1923, paragraph 4, q. v. This is an important factor affecting the situation and cannot be safely ignored. Intermediate openings, say every mile or half a mile, should be provided to allow of the local surface drainage going along its own axis, instead of seeking an exit under the main Railway waterways! If this is done much heading up between two main Railway waterways will be obviated.

5. The recommendations of the Committee are embodied in paragraph 15 of the Report. With the measures recommended I am generally in accord. These, however, will only partially ease the situation. The two chief aims to be steadily kept in view are—

(1) To reduce the intensity of the

floods to obviate loss of life and property.

(2) To interfere as little as possible with the natural processes.

6. However much we may deplore the obstructive effect of the Railway banks they have come to stay and are bound to continue to interfere with the processes of river regimen and land formation. Nobody in his senses would recommend the uprooting of the Railways and plunging the fair Province of Bengal into the backwardness of the pre-Railway days. We must accept the existing Railways as a fixture and while we attempt to mitigate their evil effects by increasing their waterways and giving direct exit to local surface drainage by intermediate openings, we must explore all the possible avenues of controlling and regulating the disposal of floods. The Committee have rightly laid stress on not interfering with the processes of Nature. Judicious regula-tion of the floods will help Nature and deprive it of its terror-spreading features. The most unfavourable coincidence of factors is, (1) heavy rains north of Kaunia-Katihar Line, (2) heavy rains south of the line and (3) abnormal rise of the rivers Ganges and Brahmaputra. Such a combination does not occur frequently but when it occurs the conditions of 1918 and 1922 are repeated. It is for this most unfavourable concourse of circumstances that the Committee has to make its recommendations. Ganges and Brahmaputra rose abnormally high last year, without any complica-tion resulting in lower Bengal, because rainfall in Bengal was not heavy. But we cannot always be so fortunate and must be ready for the proverbial "rainy day "! The Committee has asseverated in paragraph 6 of the Report that it is "satisfied that had there been no Railways at all in the area the rain which fell would have caused a flood the severity of which would have been almost as great as that which actually occurred". If this is accepted as correct the main remedy of the increase of waterway of the Railway bridges is a broken reed to lean upon and the remedial measures suggested by the Committee do not amount to much. We must, on the Committee's own showing, seek some other measure which, in addition to what has been recommended by the Committee, may appreciably reduce the intensity of the floods. This additional remedy is the control and regulation of the floods by Regulating Reservoirs. Theoretically these reservoirs will be adequate to cope with the most intense floods in their
